

SMART INDIA HACKATHON 2026

TITLE PAGE

- Problem Statement ID – 26130
- Problem Statement Title – Efficiency in streamlining industrial approvals, compliance processes, and access to government support services
- Theme – Miscellaneous
- PS Category – Software
- Team ID – TBD
- Team Name – Hessonite

**Knowledge Engine**

Asks 4 quick questions and cross-references Maharashtra's laws to auto-generate a dynamic, customized checklist.

Upload once, use everywhere. Gemini Vision auto-fills forms and flags document expiry for 1-click renewal.

**Document Wallet & OCR**

A free 24/7 conversational assistant, replying in Marathi or English on subsidies and compliance questions.

Matches applicant profiles against government subsidy databases and surfaces a Match Score for entitled financial aid.

**AI Co-pilot**

Calculates a predictive ETA from historical averages and flags bottlenecks with a live risk score.

**Schemes Matcher**

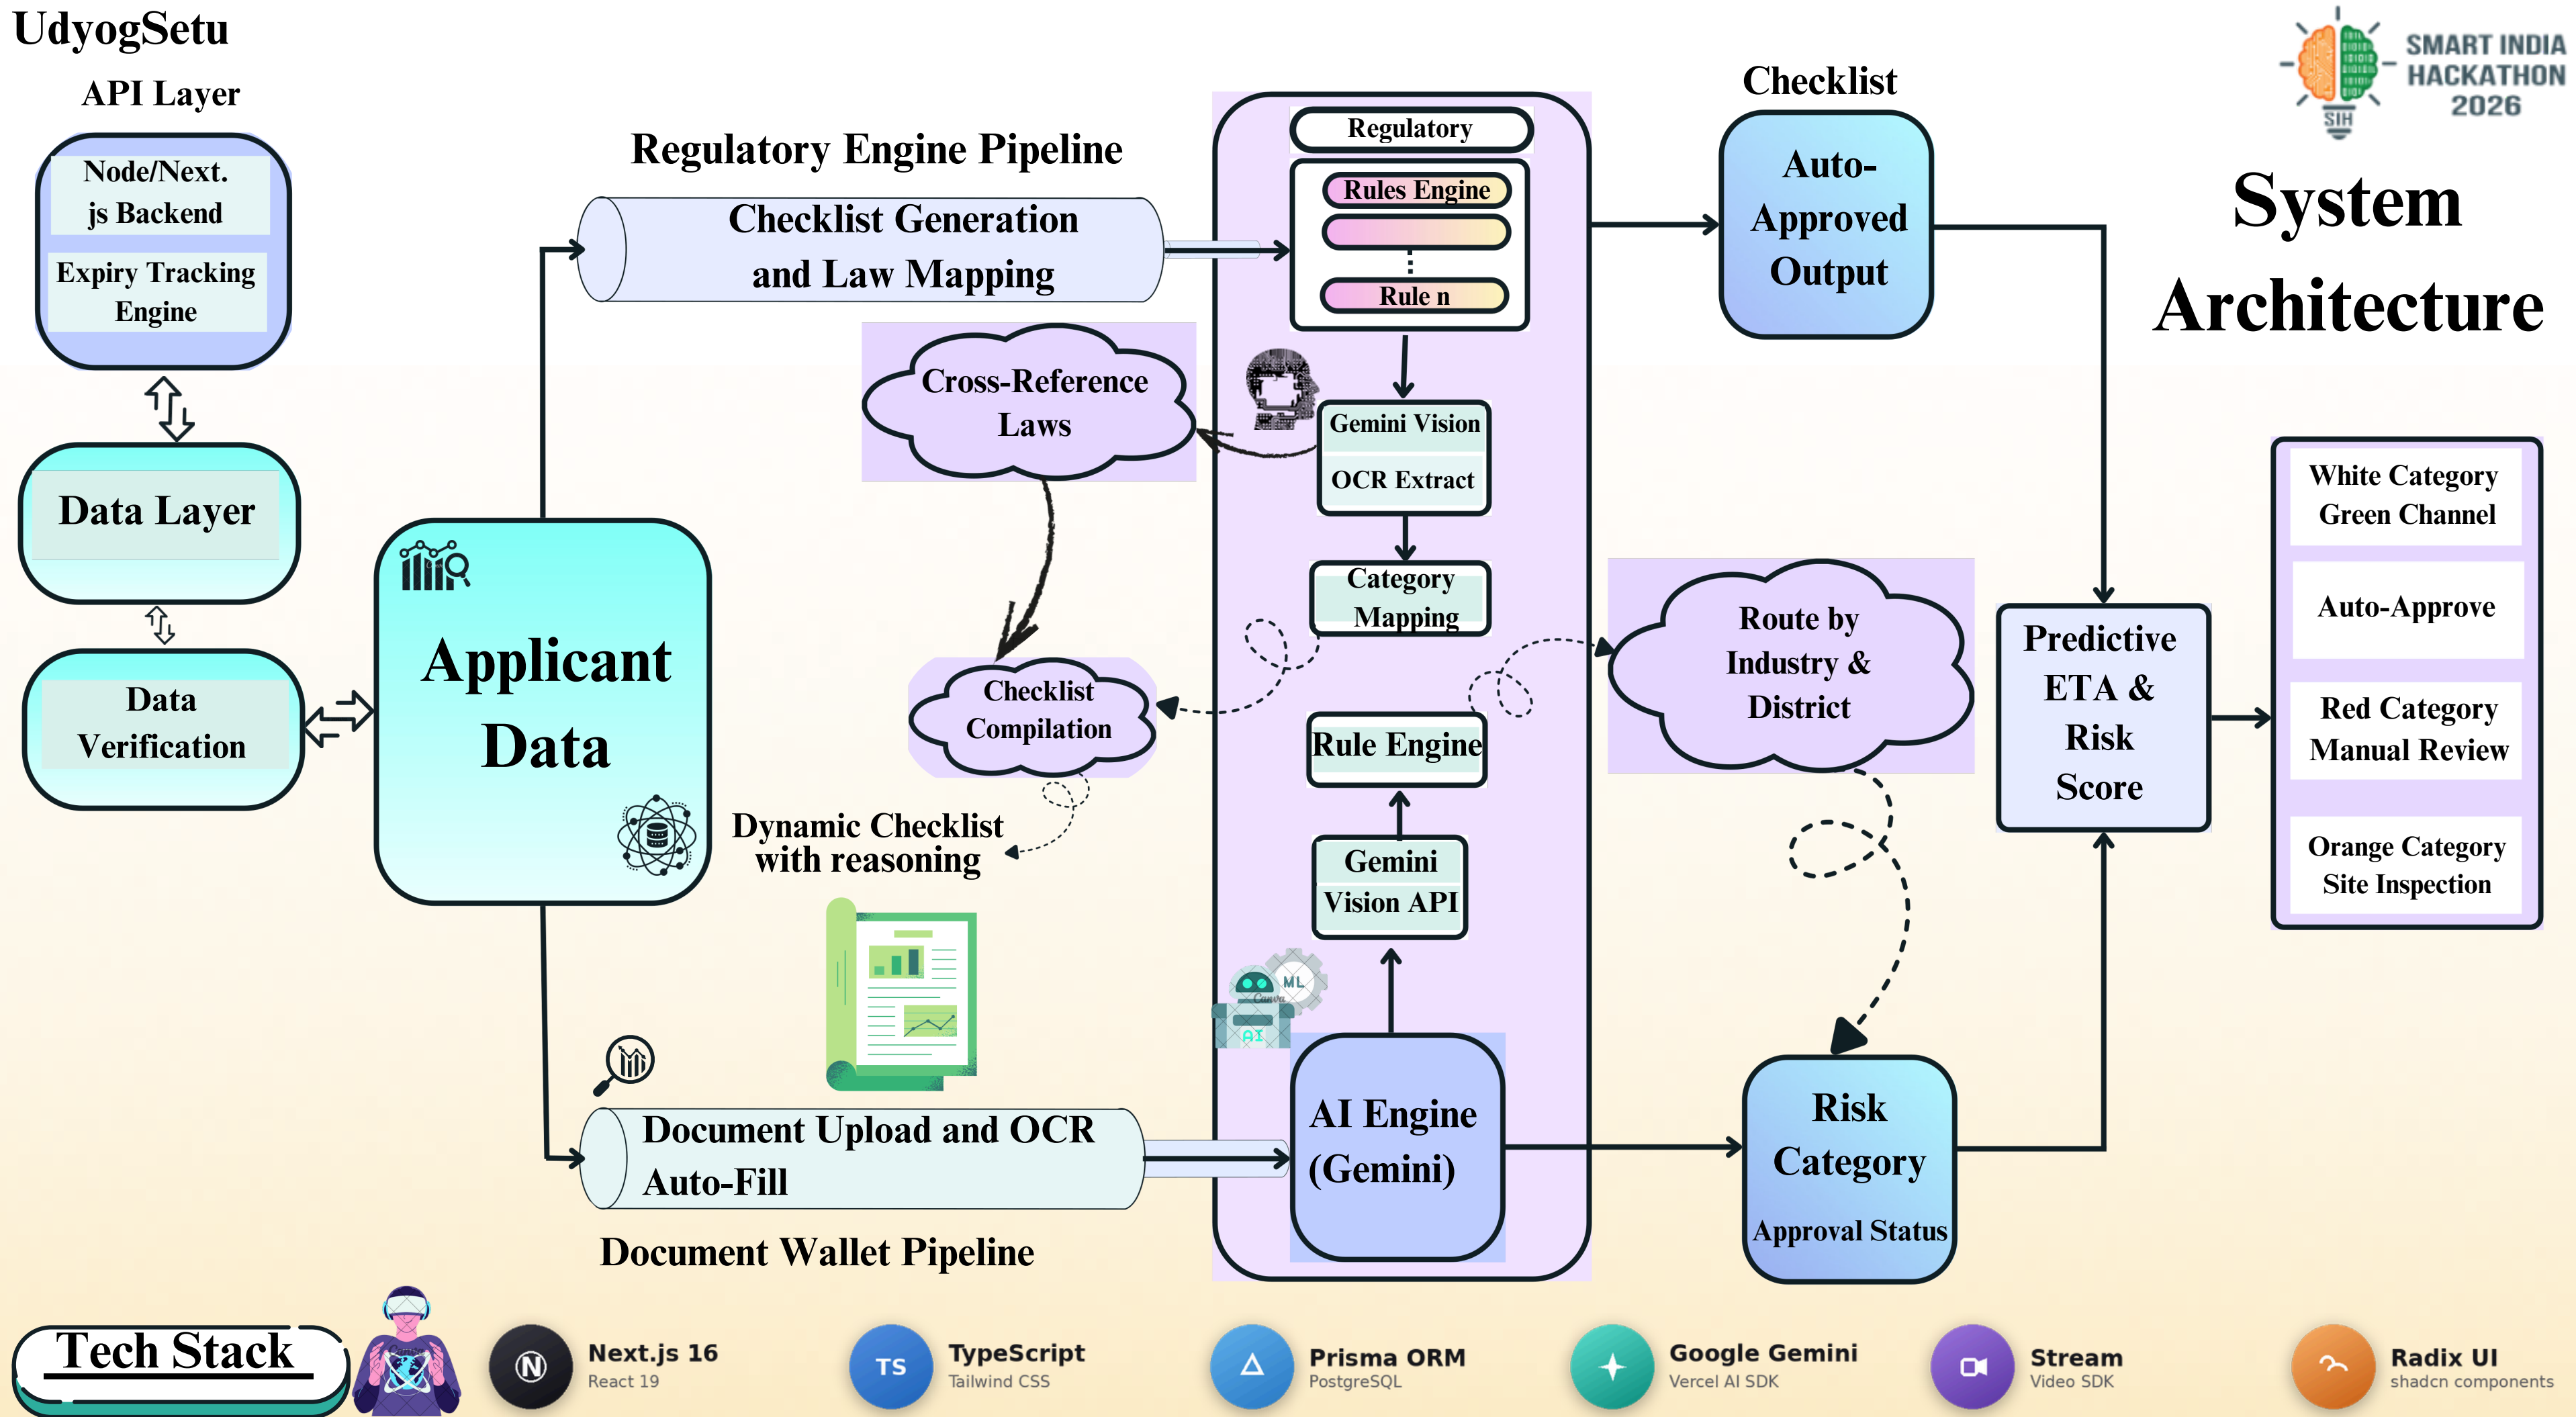

Coordinated WebRTC video inspections replace physical visits, cutting 3 weeks of scheduling to a 15-minute call.

**Predictive Tracking**

Auto-unlocks a Raise Ticket button on SLA breach, routing straight into an escalation matrix.

**Video Inspection**

**Grievance Redressal**

Potential Challenges

**Legacy System Integration**

MPCB, MIDC and DISH run on older systems with no modern APIs for data exchange.

Industrial laws and risk categories vary by district and change often.

Inconsistent Regional Rules

**Document Fraud Detection**

Verifying uploads without official government APIs makes tampering hard to catch.

Officers used to manual paperwork may resist a fully digital, AI-assisted workflow.

Officer Adoption

**Data Privacy Compliance**

Handling PAN, GSTIN and land records demands strict DPDP Act compliance.

How we Tackle Them?

**Unified API Gateway**

Lightweight adapters normalize each department's format behind one modern REST API.

A centrally maintained, auditable rules database keeps checklists current across districts.

Versioned Regulatory Engine

**Hash & Cross-Verification**

Every upload is hashed and cross-checked against source data to flag tampering.

A simplified dashboard, in-app guidance and phased pilots ease the transition.

Guided Officer Rollout

**End-to-End Encryption**

Data is encrypted at rest and in transit, with role-based access and consent controls.

Welcome back, Rahul

Here is the status of your industrial approvals and compliance tasks.

★ What Makes Us Different?

01 Dynamic Approval Intelligence

- Based on sector + location + investment + project stage
- Uses official regulations (not just AI)

02 Pre-submission Validation

- OCR + document checks
- Detects missing/incorrect data
- Reduces rejections

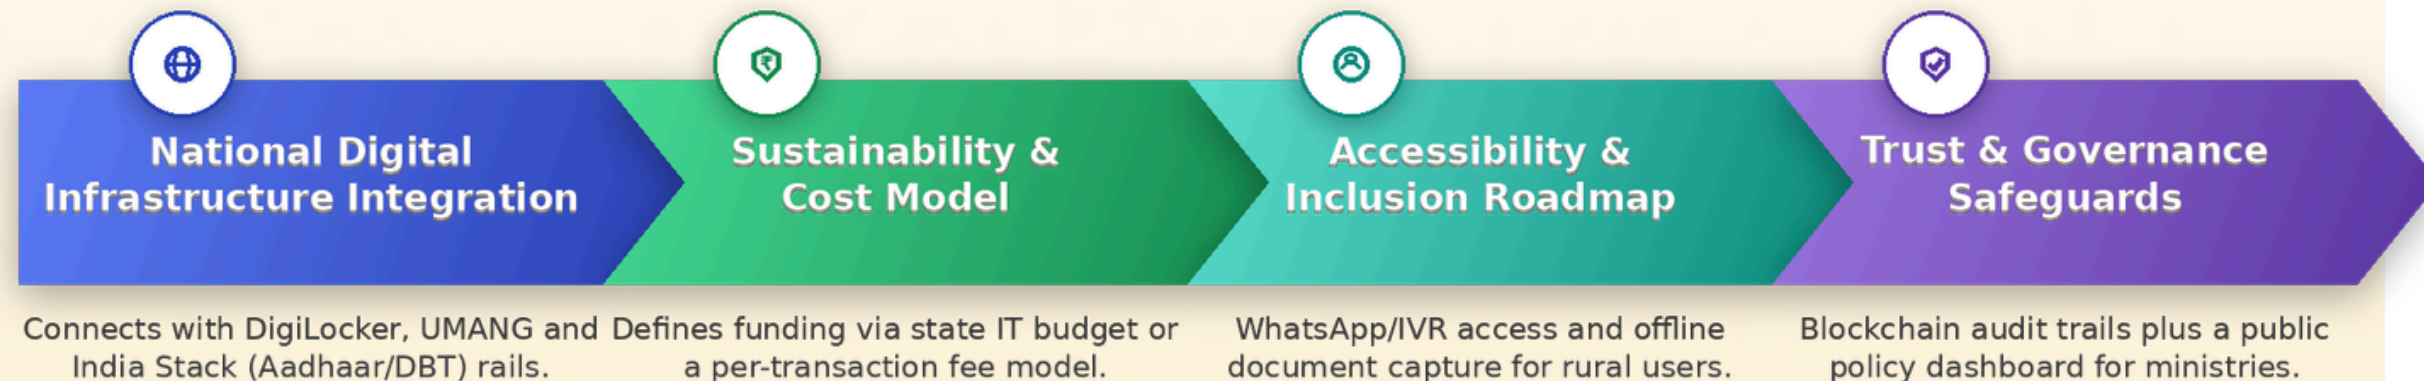

03 Parallel Processing

- Identifies independent approvals
- Routes to multiple departments simultaneously
- Saves time

04 SLA Intelligence

- Predicts delays using data + ML
- Flags bottlenecks
- Auto-escalation & notifications

Future Plans and Improvements

Economic Impacts

Wider Access:

Enables applicants statewide to apply without visiting offices in person.

Fair Treatment:

AI-driven checklists reduce discretion and bias in approvals.

Officer Trust:

Transparent audit trails build public trust in government processing.

Reduced Risk:

Predictive tracking flags delays before they become public grievances.

Better Governance:

District leaderboards drive healthy competition among officers.

Made with Nankin

RESOURCES AND REFERENCES

Social Benefits

Wider Access

Enables applicants statewide to apply without visiting offices in person.

Faster Service

Automated video inspections cut citizen wait times dramatically.

Better Governance

District leaderboards drive healthy competition among officers.

Reduced Risk

Predictive tracking flags delays before they become public grievances.

Fair Treatment

AI-driven checklists reduce discretion and bias in approvals.

Officer Trust

Transparent audit trails build public trust in government processing.
